

# What Do You See Through Your Telescope?

What do you think makes Oregon such a special place to live? Is it the different neighborhoods? Is it the forests? Is it the architecture? Grab a family member, step outside and explore your neighborhood. Pay attention to details and find things you've never seen before. Record the wonderful spaces and buildings you see and experience.

Begin with making a telescope. Roll a piece of paper into a cone shape with an opening big enough to see through easily. Tape into place.

Time to go explore! Answer these questions along your journey.  
My favorite thing I have seen today is: (i.e. building, park, open space)

My favorite detail I discovered is: (i.e. door knob, building column)

I think this detail is created by: (i.e. architect, engineer, contractor)

Draw the details you find in the boxes below.
